

Savage Range Systems

The Savage Shooting Booths

The Savage All-Clear Shooting Booth is glazed to provide DOJ Level 3 protection (3 rounds from a .44 Mag). The bullet-proof glass provides an unobstructed view of the firing line. The steel frame trim is black powder-coated and there is an optional swing-out barrier to practice shooting from behind cover. There is also an optional blast-shield available for the front, which protects adjacent shooters from muzzle blast. Controls for target retrieval can be mounted on the booth. Booths may be customized to any width. Each booth contains a black-laminate lift-out shelf with two recesses and can be customized to fit any width of booth.

The Savage SB-LEX Shooting Booth is constructed with level 3 bullet-resistant Lexan® for the top half and 3/8" AR500 steel for the bottom half of each side. A removable wood shelf is 12" deep and has two recesses for brass, magazines, etc. Shooting booths and their shelves may be customized to any width. Controls for target retrieval can be mounted on the booth. All shooting booths are designed so that adjacent booths share the common side wall.

The Savage Shooting Booth Shelf is a 12" deep shelf with two recesses and can be customized to suit any lane width.

Also available in a non-glass version, with steel-core opaque sides offering the same bullet-proof features as our All-Clear model.
